Quality Seed to Every Farmer --- Mbegu Bora Kwa Kila Shamba

### Valoria F1 Hybrid

- ✚ *Is a high yielding F1 Hybrid tomato with excellent disease resistance.*
- ✚ **Valoria F1** is a quality hybrid with unique features. It is meant for both the **fresh and processing market**. This is attributed to its **good keeping quality** and also allows farmers to transport over long distance without being damaged.
- ✚ In tomato production more often than not, many farmers coincidentally or with full knowledge witness a condition known as sunburns on the fruits. Sunburns occur when the fruits are exposed to direct sunlight for a prolonged time. It is a whitish patch or discolouration on the rind. To this extend, Valoria F1 has **excellent fruit cover** hence, minimal fruit exposure to sunlight.
- ✚ Its **resistance to diseases** such ***verticillium wilt*, *fusarium wilt*** and ***stemphyllum*** cannot be overemphasized. It also has fairly good tolerance to blights and viral infections. These are serious diseases in tomato production and cause losses. This is important as yields are high due to reduced loss through diseases.
- ✚ Being an **early maturing hybrid**, it assures the farmer of early returns. High yields of this hybrid are first attribute to the fact that it fills completely the inside of the fruit with minimal space for the succulent part. Secondly, it is a **high yielding hybrid** with a staggering **400 crates of 60Kg per Acre** out of which 75% are grade 1 with few as grade 2. The **picking period** is 2 - 2½ months.
- ✚ To achieve the aforesaid yields, one has to exercise high crop management where field sanitation and ideal agronomic practices have to be practiced as a rule of the thumb.

✚ ***Valoria, for Ready Cash!***
